Appendix E: Comparison Charts

Explanation of Comparison Chart

The following series of tables provides detailed data about community characteristics for reference.

In each section, key characteristics are reported for the overall population on the top row, as well as for subgroups of the population, with each appearing in a row below. All rows are identical throughout the document.

Each column reports on one of the variables of interest, showing the proportion of adult Jews or Jewish households (depending upon the question) who fall into the category indicated. In some cases, a complementary column is elided for the sake of saving space (i.e., males are shown, but not females). Where areas of the document are solid black, the question was not applicable for the particular subgroup indicated by the row header. Where areas are colored light gray and numbers appear, there is a statistically significant difference between the subgroups.

Selected subgroups are defined as follows:

Overall: all Jewish adults or all Jewish households

Involvement: See the following page for detailed description of the Involvement categories.

Marriage Status: For respondent-level variables, Unmarried are respondents who are not living with a spouse, fiancé/e, or significant other. Inmarried are Jewish respondents living with a Jewish spouse, fiancé/e, or significant other. Intermarried are Jewish respondents living with a non-Jewish spouse, fiancé/e, or significant other. For household-level variables, Unmarried are households with no coupled individual. Inmarried are households containing two Jews in a romantic relationship. Intermarried are households containing a Jew and non-Jew in a romantic relationship.

Residence Status: Year-round are households who do not have a second home. Seasonal, Primary are households who also have at least one residence aside from their Naples-area home, and who say that the Naples-area home is their primary residence. Seasonal, Secondary have at least one residence aside from their Naples-area home, but who say that the Naples-area home is not their primary residence.

Length of Residence: Jewish respondents who have lived in the area for fewer than 10 years and those who have lived in the area for 10 or more years.

Synagogue Membership: Synagogue member households belong to a Jewish congregation, either in Greater Naples or elsewhere. Non-members do not.

MCA/WCA Membership: Member households contain an individual who belongs either to the Men's Cultural Alliance or the Women's Cultural Alliance of the Jewish Federation of Collier County.

Involvement variable

The involvement variable divides Jewish households into four categories based on their level of involvement in the local Jewish community across three key dimensions: organizational membership, organizational participation, and prosocial behavior.

1. *Membership*: Respondents were asked if they were members of the six Collier County synagogues or any other synagogue in the area; if they were members of other organizations in Greater Naples; if they were members of informal Jewish groups based in Greater Naples; and if they belonged to the Men's Cultural Alliance or Women's Cultural Alliance. Each membership type was scored as 0 (non-members) or 1 (members), and then added together. Scores of 0 were coded as "no" organizational involvement, scores of 1 were coded as "low" organizational involvement, scores of 2 were coded as "moderate" organizational involvement, and scores of 3 and 4 were coded as "high" organizational involvement.
2. *Participation*: Respondents were asked how frequently they engaged in a variety of activities connected to local Jewish organizations and programs: participating in programs, reading materials, or paying dues. For participation in programs and reading materials, respondents were asked to indicate if they did each activity less than monthly or at least monthly, if at all. Responses of never were coded as 0, less than monthly were coded as 1, and at least monthly were coded as 2. Dues paying was coded as 2. All scores from participation types were added together. Overall scores of 0 were coded as no participation, 1 and 2 were coded as "low" participation, 3 and 4 coded as "moderate" participation, and 5 and 6 coded as "high" participation.
3. *Prosocial Behavior*: Respondents were asked if they had volunteered for or through local Jewish organizations, and if they made any charitable donations (other than membership dues) to local Jewish organizations in the past year. For the two types of volunteering, the respondent's higher frequency of participation was used. Responses of never were coded as 0, less than monthly were coded as 1, and at least monthly were coded as 2. Donations to local Jewish organizations were coded as 1. All scores from volunteering or donating were added together. Scores of 0 were coded as no prosocial involvement, scores of 1 were coded as "low" prosocial involvement, scores of 2 were coded as "moderate" prosocial involvement, and scores of 3 were coded as "high" prosocial involvement.

An index was constructed from these three forms of involvement in the Jewish community. For each form of involvement, respondents who scored "low" were given one point, those who scored "moderate" were given two points, and those who scored "high" were given three points—and those who did not score in a dimension were given zero points. When scores across each form of involvement were added up, respondents could have scores between zero and nine points. Respondents with an index score of 0 were coded as having no formal involvement in the local organized Jewish community; scores of 1, 2, and 3 were coded as having low involvement; scores of 4, 5, and 6 were coded as having moderate involvement; and scores of 7, 8, and 9 were coded as high involvement.

Explanation of Comparison Chart

The following series of tables provides detailed data about community characteristics for reference.

In each section, key characteristics are reported for the overall population on the top row, as well as for subgroups of the population, with each appearing in a row below. All rows are identical throughout the document.

Each column reports on one of the variables of interest, showing the proportion of adult Jews or Jewish households (depending upon the question) who fall into the category indicated. In some cases, a complementary column is elided for the sake of saving space (i.e., males are shown, but not females). Where areas of the document are solid black, the question was not applicable for the particular subgroup indicated by the row header. Where areas are colored light gray and numbers appear, there is a statistically significant difference between the subgroups.

Selected subgroups are defined as follows:

Overall: all Jewish adults or all Jewish households

Involvement: See the following page for detailed description of the Involvement categories.

Marriage Status: For respondent-level variables, Unmarried are respondents who are not living with a spouse, fiancé/e, or significant other. Inmarried are Jewish respondents living with a Jewish spouse, fiancé/e, or significant other. Intermarried are Jewish respondents living with a non-Jewish spouse, fiancé/e, or significant other. For household-level variables, Unmarried are households with no coupled individual. Inmarried are households containing two Jews in a romantic relationship. Intermarried are households containing a Jew and non-Jew in a romantic relationship.

Residence Status: Year-round are households who do not have a second home. Seasonal, Primary are households who also have at least one residence aside from their Naples-area home, and who say that the Naples-area home is their primary residence. Seasonal, Secondary have at least one residence aside from their Naples-area home, but who say that the Naples-area home is not their primary residence.

Length of Residence: Jewish respondents who have lived in the area for fewer than 10 years and those who have lived in the area for 10 or more years.

Synagogue Membership: Synagogue member households belong to a Jewish congregation, either in Greater Naples or elsewhere. Non-members do not.

MCA/WCA Membership: Member households contain an individual who belongs either to the Men's Cultural Alliance or the Women's Cultural Alliance of the Jewish Federation of Collier County.

Involvement variable

The involvement variable divides Jewish households into four categories based on their level of involvement in the local Jewish community across three key dimensions: organizational membership, organizational participation, and prosocial behavior.

1. *Membership*: Respondents were asked if they were members of the six Collier County synagogues or any other synagogue in the area; if they were members of other organizations in Greater Naples; if they were members of informal Jewish groups based in Greater Naples; and if they belonged to the Men’s Cultural Alliance or Women’s Cultural Alliance. Each membership type was scored as 0 (non-members) or 1 (members), and then added together. Scores of 0 were coded as “no” organizational involvement, scores of 1 were coded as “low” organizational involvement, scores of 2 were coded as “moderate” organizational involvement, and scores of 3 and 4 were coded as “high” organizational involvement.
2. *Participation*: Respondents were asked how frequently they engaged in a variety of activities connected to local Jewish organizations and programs: participating in programs, reading materials, or paying dues. For participation in programs and reading materials, respondents were asked to indicate if they did each activity less than monthly or at least monthly, if at all. Responses of never were coded as 0, less than monthly were coded as 1, and at least monthly were coded as 2. Dues paying was coded as 2. All scores from participation types were added together. Overall scores of 0 were coded as no participation, 1 and 2 were coded as “low” participation, 3 and 4 coded as “moderate” participation, and 5 and 6 coded as “high” participation.
3. *Prosocial Behavior*: Respondents were asked if they had volunteered for or through local Jewish organizations, and if they made any charitable donations (other than membership dues) to local Jewish organizations in the past year. For the two types of volunteering, the respondent’s higher frequency of participation was used. Responses of never were coded as 0, less than monthly were coded as 1, and at least monthly were coded as 2. Donations to local Jewish organizations were coded as 1. All scores from volunteering or donating were added together. Scores of 0 were coded as no prosocial involvement, scores of 1 were coded as “low” prosocial involvement, scores of 2 were coded as “moderate” prosocial involvement, and scores of 3 were coded as “high” prosocial involvement.

An index was constructed from these three forms of involvement in the Jewish community. For each form of involvement, respondents who scored “low” were given one point, those who scored “moderate” were given two points, and those who scored “high” were given three points—and those who did not score in a dimension were given zero points. When scores across each form of involvement were added up, respondents could have scores between zero and nine points. Respondents with an index score of 0 were coded as having no formal involvement in the local organized Jewish community; scores of 1, 2, and 3 were coded as having low involvement; scores of 4, 5, and 6 were coded as having moderate involvement; and scores of 7, 8, and 9 were coded as high involvement.
